

ABSTRACT

Art plays a vital role as a medium of expression and therapy, particularly for individuals with disabilities. However, access to inclusive art spaces in Indonesia remains limited. This study focuses on the inclusive interior design of an art studio for neurodivergent artists at Tab Space Bandung—a creative space that adopts an art as therapy approach. Key interior elements such as walls and lighting are highlighted, given their significant role in supporting the creative process. The research identifies spatial needs, facilities, and equipment based on the principles of universal design and multisensory accessibility. The results aim to contribute to the development of inclusive art environments that empower artists with disabilities, support their creativity, and promote equality through art.

Keywords: *inclusive design, neurodivergent artists, element interior, art as therapy.*
