

PLANNING PLAYGROUP & 3 LANGUAGE KINDERGARTEN IN BANDUNG WITH BEHAVIORAL APPROACH

ABSTRAK

Abstract : Early childhood (0-6 years) is a crucial period in brain development, during which children's intellectual abilities develop rapidly. Early childhood education (PAUD) plays a significant role in supporting children's cognitive, motor, social, emotional, and language development. One form of non-formal PAUD, playgroups, is designed to foster social and motor development in children aged 2-4 years. Although several locations in Bandung City already have kindergartens (PAUD) with a trilingual curriculum, the Podomoro Park area still lacks PAUD facilities that support such learning. The design of playgroups and kindergartens focuses on child behavior in learning. The proposed design concept emphasizes flexible spaces, bright colors, good lighting, and safe and comfortable furniture for children and caregivers. This design is expected to foster greater enthusiasm for learning, focus, independence, and confidence, especially in trilingual learning. Furthermore, this project aims to address the shortage of PAUD facilities in the area and meet the needs of working families who desire innovative PAUD that supports the holistic development of children.
