

ABSTRACT

In everyday life, individuals are expected to become financially responsible, one of which can be achieved through effective money management. With the advancement of technology, mobile-based applications have emerged as practical solutions for daily financial tracking and management.

This final project resulted in a mobile application called LifeChanger, which helps users record, calculate, and manage their daily income and expenses using an Android smartphone. The application also includes features for managing schedules and financial goals.

The development process involved analyzing user requirements, designing the user interface using Figma, storing data with Firebase, and implementing the application using Flutter and Visual Studio Code.
