

ABSTRACT

Bebek Palka Restaurant is one of the dining establishments located in Banten Province, specifically on Jl. Raya Palka Cinangka, Cinangka District, Serang Regency. Currently, this restaurant still monitors its inventory manually and requires an automated financial reporting system that can assist in analyzing the ongoing business performance. Therefore, a system has been developed to manage sales that is directly integrated with inventory, as well as to provide automatic reports that facilitate users in accessing sales reports, general journals, and ledgers within a single system.
