

PERANCANGAN ULANG MUSEUM SRI BADUGA

ABSTRAK

Abstract : *Museum Sri Baduga, located in Bandung, serves as a center for the preservation of West Java culture. In addition, the museum plays a role in educating the public and providing entertainment through various engaging exhibition techniques. The museum faces challenges related to navigation systems, indoor climate, accessibility for people with disabilities, and the utilization of its technology. This redesign project aims to improve the visitor experience at Museum Sri Baduga based on the comfort and attractiveness of the museum as an educational and cultural recreation space relevant to the modern generation. The methods used include field observations, interviews, questionnaires, and comparative studies. The design outcomes include an effective circulation and navigation system, temperature and humidity control, universal design to support accessibility, and technology optimization.*

Keywords : *Redesign museum; technology; accessibility; visitor experience*
