

ABSTRACT

Evaluating potency and network performance hardware at PT Telkom Indonesia need potency and performances every exchange and transmission canal report every month. But Each Kandatel have different format report to make report in same equipment, even though PT Telkom Indonesia has a formal report. So that reporting officer at UNR region 3 work hard to unity each report from Kandatel become a report UNR region 3

This report will use as material to make decision by UNR it self and also another work unit. This report must be submit as fast and accurate as possible .This report only made to exchange information, not including transmission system and ration energy

There is two entry input data method in this application system. That is input data manually and upload file from generate exchange (Parsing proceed). From two input resulted five kind of exchange report: That is Downtime, Fromtek, Kapasitas, SPPS2,SPPS5,SPPS7 report. This application use major programming language PHP and MySQL database.

Keyword : EWSD, web application, file parsing
