ABSTRACT

The developement of technology increase vey fast, human with their needs have to be fullfill. One of the aplication that their could use are microcontroller, the benefit of the microcontroller, for example: simple, and it can integerated with the other tools, one of the microcontroller is Atmega 16, which been produced by ATMEL company.

In this final project, it been realizing of the sistem ordering food and drink, and sistem integrated with LCD for the output and keypad as the media for input the menu, the sistem also connected with PC using wirelles as database for every menu which has been ordered. But at this final project only realizasing the sistem ordering.

After that, at this final project had been analized the performace of the sistem, and the transmision data.
