

## ABSTRACT

*In fast technological growth, it is not impossible all amenity is all people need. More over, in this moment we have big supply application in form of information technology facilitating people for their activity. Practically, a business organization need a system which able to assess performance from organization itself apart from advantage of product sale.*

*This system will use some parameter to assess organization performance like responsibility (later on shortened by TJ), management contract (later on shortened by KM), where this parameter reside in entire organizational level and entire loker. And also many important parameter that indicate the success for the organization such as indicator, value harmonization, target, realization.*

*In principle, system to be made this data organization related to this application scheme. As picture, output from this scheme can be predicted as : can define action to be conducted to make organization remain to be healthy.*

*Key word : responsibility, contract management, level, loker*
