

## Abstract

*E-Commerce*, which developed rapidly as the effect of internet in business activities makes anything easy. But the problem is we have to browse the different *E-Commerces* to get the different services in complex business activities. The example is in online trading that need exchange value of currencies to establish the sell price of products and delivery service to distribute them. From that problem we have idea to integrate many *E-Commerce* to makes integrated service, called *E-Business*.

Data exchange inter *E-Commerce* application in *E-Business* is the most problem. The simplicity and flexibility of *Extensible Markup Language* (XML) dan *Really Simple Syndication* (RSS) that using XML for its format is the solution for data sharing media.

By implements XML and RSS 2.0, *E-Business* that contain of many *E-Commerce* which exchanges the data and do their each functionality has been produced.

**Keywords:** *E-Commerce, B2B integration, XML, RSS 2.0.*
