

Abstract

Enterprise are powered by information to understand the business and make decisions, to customers, partners or employees, or to support business processes and applications. Data is at the core of all business activity. An enterprise also have support applications which often do integration data between them. Those applications built in different platform. But, organizations are faced with the problem of accessing the data easily, consistently and securely. Data is everywhere with an increasing growth rate, with diverse types of data sources.

EII (Enterprise Information Integration) offers an ability to provide an unified view from different sources as a way to integrate information dast and easy. Implementation from this concept is data service.

This Final Project want to use EII to give an easy way for user to reconcile data an benchmarking to the technology using data in great number which leveraged from different
