## **Abstract**

Decission Support System is a computanial atribute's value process from data collection, afterwards it got result which data is better then others, with that result it can make easier for decission maker to make decission. It is also with this Final Project where this Decission Support System is implemented into Dinas Pemukiman dan Prasarana Daerah (Kimprasda) Ciamis, for tool assistance to appoint an auction winner, either in pra qualification phase and also paska qualification phase by using Electre and Topsis Mehod. This matter because of in taking decission by decission maker about auction winner requiring huge time and big effort. After the test with several weight value is done, this testing result shows that both methods can be used to make decission about auction winner with accuracy level up to 77,39%. This accuracy level is computated by comparing contractor's rank result from this sistem with contractor's rank result from manual sistem which has be done before.

Key words: decission support system, electre, auction, topsis, Kimprasda.
