

Abstract

Steganografi is art and science hide message of secret in other message so that existence of message of the secret ignorable. Steganografi come from Greek, that is "steganos" with the meaning article hidden, differing from kriptografi that is concealing message meaning, whereas message eksistensi there is still

In this Final project of method implementation have LSB standard, MER, and modification of MER, third this method is seen by performansi that is by counting SNR

From some analysis and examination got that method of LSB standar method better than method of MER, and method modify MER better than method of LSB standard , method modify MER insertion of message at beet layer of ke-6 have the quality of audio which much the same to with insertion of message at beet layer fourt of method LSB standard

Keywords : MER, MER modification, LSB standartd, audio, resampling, bit rate
