Learning Management System (LMS) is an application of e-learning designed to process delivery, tracking, reporting and managing to items content e-learning. But the problem is only one LMS can read one packet (content) e-learning, it's meaning when a packet of e-learning wish read by another LMS have to reconfiguraton.

SCORM (Sharable Content of Object of Reference Model) is method which can solve a problem. SCORM represent a making content e-learning standard, with SCORM content e-learning can be read by each vendor application LMS being based on SCORM.

In this final project we will Study analyse to Learning Management System by using SCORM. How a packet (content) e-learning using SCORM can be read by each LMS without having to reconfiguraton. Implementation use PHP programming language.

Keywords : *LMS, SCORM*
