Abstract

Nowdays, Rich Internet Application web were going massive, because a lot of vendors want to make perfections in theirs application to provide everything RIA's web can make in easy and fast way. Microsoft Silverlight and Adobe Flash was a technique ussually applied in web application development. And to develop a web application which contains a video media.

To choose which technique was better needs to test for loading video contents, data tunggal testing, data jamak testing and running a tunggal animation. Flash and Silverlight depends on their browser plugins. Flash have better performance when loading data on video gallery playlist, loading single data type and loading a various data types, in other case Silverlight has a better performance when perform a simple animation.

Keywords: Rich Internet Application, Microsoft Silverlight, Adobe Flash, Compatibelity.
