

## ABSTRACT

Telkom institute of technology or we usually hear IT Telkom is one of the private institute that focus in information and communication. IT Telkom has facilities that can redound the learning activities in campus. IT Telkom has site that can be accesed in internet. However, there are lacks from the site, the lacks is information and visualitasion too minim, it's make the students that will register not enough to get all of information they need. If visualitasion about the facilities is clearly ,completely and atrcactive will be the powerfull site too get attention about IT Telkom. Because of that, site need to be repair, with more information and visualatasion so it can be the advantages for IT Telkom to attract the students and also give the wonderfull effect to new students. With the new system, the students registration more succesfull.

There are some steps in designing the system information and management. The first step is collecting information, design information system. Next step is realitasion step from the design. Final step is finishing pervaded the implementasion and testing the system information.

The output in this project is the design of IT Telkom Student Registration System Information Management with the complete information not only about registration, visualization facilities IT Telkom, so registration more easy, help IT Telkom student candidates to get more information and improve the existing system.
