ABSTRACT

Nowadays, technology network are rise up not only from equipment side, but also from applications side as medium to get information. Web is one of information source which used so that user can be interacted with information supplier quickly and easy by internet. Web application not only give static information, but also can give dynamic information with database connection. IT Telkom is one of campus which based on telecommunication technology that uses many variant of equipment and technology network so that whole of activity which done in campus (in this case is campus occupant) even IT Telkom aspirant student going practically, quick and save. Registration system of IT Telkom new student now still use method that not effective, new student do registration manually with fill own data form, take own picture, print ksm. Remember many of new student come from out of Bandung,so isn't not impossible if they must spend more expense and time than them who live in Bandung.

For that, in this final project explain about design of online registration system based on web with use PHP and Javascript as program in script to make dynamic layout, for database program use MySQL. With this application ,make easier and less parent responsibility of IT Telkom new student to do registration and college payment.

Keyword : WEB, PHP,*Javascript*, MySQL, *Dreamweaver, web stress tool*, *Extended Statusbar*
