

ABSTRACT

Inheritance is one part of Islam that must be understood because of its application in Islamic societies is compulsory aspect of the divine teachings of Islam. The calculation of inheritance becomes a complex thing in the lives of Muslims, it is related to the calculation of property in various forms sperti livestock, money, objects, etc.. In fact Muslims belonging to the lawyer-implementasian difficult calculation of inheritance due to a lack of deep understanding of inheritance. Muslims generally do kosultasi to scholars who have an understanding of the calculation of inheritance.

In this Final project, designed an online application web-based calculation of inheritance. In making this first application built with HTML and PHP as a language for programming and My SQL database server and Apache as well as using XAMPP as the PHP installation package. After that, designing web menus in accordance with the purposes of this application that is easier for those Muslims who want to calculate inheritance and consultation on the science of fiqh inheritance.

From the design and implementation of online applications web based calculation of inheritance, thea application can operate properly in accordance with the calculation of inheritance islamic juris prudence and can be consulted regarding the inheritance of islam.
