

Abstract

At this time of Science and Technology (Science and Technology) in Indonesia is growing rapidly. Utilization of Information and Communication Technology (ICT) has pushed the world toward a new order, especially in education. Budi Utomo Education Foundation (YPBU) is one of the foundations of education in Indonesia to promote Indonesia, especially in education. Information systems Education Foundation Budi Utomo (YPBU) still apply information technology. Therefore Budi Utomo Education Foundation (YPBU) requires information systems that can provide information to students in academic Budi Utomo.

One effective information medium is the web. At the end of this project will be made Design and Implementation of Information Systems Academic Systems (junior high, high school, vocational school) Education Foundation Budi Utomo (YPBU) as a Web-based solution to facilitate YPBU in providing student academic information Budi Utomo. In these information systems are admin menu, the principal, homeroom teachers, and teachers who can provide academic information to students Budi Utomo. With the application of web-based academic students and teachers can access educational information in an efficient and easy to apply.
