

## **ABSTRACT**

*Computer technology is growing rapidly with the advent of the internet which can be interconnected thousands of computers around the world to form vast network. Everybody can access into the network to exchange information on various kinds of text data, images, sounds, files, etc. Beside, the internet network can be accessed 24 hours. Then by utilizing the Internet as an intermediary for the transaction or just information products that will be offered by a business to consumer, it's very effective to promotion new product to consumer and to increasing consumer trust. Not only sell their product, but also the seller can introduced their hometown and the comodity.*

*Based from this problem, is needed a efective media to reaching the aim. One of the most effective medium of information is the web. So in this project we made WEB-BASED INFORMATION SYSTEM APPLICATIONS FOR JEMBER TRADITIONAL FOOD TRADING AT HAMDALAH SHOP. Which can give costumer convenience to purchasing an item by using the web media. This web using rogramming languages html, php and javascript using Macromedia Dreamweaver software, while processing using a MySQL database.*

*With this application, the service from the Hamdalah Store become better and easier, because it no longer fully use the transaction directly..*

**Keywords :** *Web Application, transaction, Administration, Website*
