ABSTRACT

Gereja Batak Karo Protestan (GBKP) Bandung Pusat is a Protestant Christian community associations in the city of Bandung. This church is a avenue for Christian religious worship and to know each other that one member with another member. To maintain the spiritual life of this Church, the Church held a service to congregation to help his Church grow better ini the good life environment of Church and Society. Information about services held by the Church organizedthe "Church News" delivered once a week to the Church.

As the times in the field of Technology and Telecomunications "Warta Jemaat" felt less effective to support the advancement of the Church's ministry to the Church because of the cost of printing costs a lot to the Warta Jemaat. In addition, the Warta Jemaat perceived to be less effective reminder of the activities because they can not be open anytime and anywhere, and do not follow the development of Telecommunications Technology world is now a necessity in daily life -today. Looking at it, making web for Gereja Batak Karo Protestan (GBKP) Bandung Pusat, whichcontains all the activities to be implemented in the Church and every Churchmembership data, be expected able to facilitate the activities of the Church to know -what activities will be carried out of the Church.

Information systems are designed to be made as attractive as possible and as completely as possible to facilitate the church in getting information on the need. In addition to the web, this system will be equipped with an SMS Gateway that serves todeliver information - information vital to the Church.

Keywords: GBKP Bandung Pusat, Warta Jemaat , Web Site, and SMS Gateway.
