

ABSTRACT

Polyclinic is a special place which enabled to check their health conditions. IT Telkom with the slogan "Healthy Campus" has been entered and inaugurate the health clinic. The clinic is located behind the building GSG. The presence of this clinic is expected to be a solution in terms of students health.

This clinic information system is still conventional, not to apply information technology. Having conducted interviews with paramedical staff and administrators polyclinics, it is still no shortage of financial information systems, medicine, and medical history patients.

In this final project will be made an application *Polyclinic Information System Web-Based IT Telkom* as the solution offered to facilitate in terms of managing finances, medications, or health history that will be stored in a database. Expectations of this application is for IT Telkom polyclinic paramedical personnel can access information easily and more quickly in a recap of patient data, financial reporting, as well as in search and check supplies of medicines. In addition, the efficiency of service time to the patient increase. Not only that, but also the patient can know the health history as well as gain knowledge about health in order to live healthy.
