

ABSTRACT

In the era of globalization are so many people are using technology to meet their needs. Not least in the public service. One of the very need of technology services is a media student services performed by Student Affairs Section (BK). In the case of Telkom Institute of Technology Student Affairs Section.

Telkom Institute of Technology Student Affairs section consists of two areas, namely areas of student welfare and student guidance areas. In this final project only addresses the field of student guidance. In the area of student guidance activities it undertakes, among others, not the system but the system has not been able to know the distribution of student activities, the submission of a proposal which is still done manually, borrowing items that are still done manually, and laboratory information Ormawa but there is no division based on the type of field and ormawa there is no division of the laboratory based on faculty.

Based on these problems at this end of the project created a web-based application using PHP programming to be used as user interface and MySQL as database. System is required of them, not the more leverage the system so that it can see the distribution of student activity. Funding proposal submission system is online. Data collection system borrowing items online. Ormawa and laboratory data collection system. And then be carried out correlation with student welfare web.
