

ABSTRACT

Education is important for the future generation for of the Indonesia Purposes as stipulated in the opening Act of 1945. To realize these goals will be established .Institutions can provide the science for the nation who called Alphabeta. This institution is an institution established to educate children of the nation and in the city of Jepara. These institutions are still not familiar with the web and still use a traditional database system. To facilitate the students and made a web admin.

This Web is made using FrameworkCode Igniter and PHP and MySQL which have easier access to the admin and the participants. This Web contains features that can help participants to be able to see grades, attendance and advertisement. Based on the above problems, then the final project will be designed to promote a website for these institutions and can facilitate to see grade and absent . This web is expected to simplify and facilitate student admin to access data that is more efficient in its use.

Based on the above problems, then the final task is designed to promote a website for these institutions and can facilitate the learning process. This web is expected to simplify and facilitate student admin to access data that is more efficient in its used.

After testing and implementation, obtained several can help in promoting Alphabeta Institutions tutoring, as well as to provide convenience for students who want to view and download the task without having asked the teachers and also provides an easy process teaching and learning. From subjective assessment of the 15 students and 5 teachers get results obtained in terms of subjective pupil average total 3.89 and in terms of subjective teacher earned an average of 3.8 total scale of 1 to 5, where the results are pretty good. It is based on subjective testing of Alphabeta Institutions, students and teachers who agree to this system mad
