

## **ABSTRACT**

*The music industry is currently evolving, it is seen from the number of newcomers to the indie band brings a variety of musical genres. However, sometimes the work of creation song they are channeled into the community because of the costs to promote their band to record labels as well as the place and time limited. Therefore I create a website to share information and indie band in Indonesia.*

*Making this website using CodeIgniter framework, mysql database, web programming languages such as jQuery and CSS. CodeIgniter Framework is used to facilitate the development and expedite access the website by using the concept of MVC (Model-View-Controller). Visitors can register the identity of the band and insert them along with video song creation with embedded systems from youtube.com. All data that has been uploaded will be stored in mysql database and display on their profiles. The website is called "indie-corner". The features on the website are made at the end of this project is the latest news about the world of music, events or festivals in Indonesia, video streaming to help promote the song and find the necessary information.*

*After testing the functionality of all the menus / features that are well underway, and the subjective test results taken from the calculation of the resulting assessment questionnaire to: display 3.86 (enough), feature 3.87 (enough), high 3.86 (enough) benefits 4:06 (enough) and 3.1 overall total in the category of pretty.*

**Keywords:** *indie bands, events, streaming, news, label.*
