

ABSTRACT

Education is a very important aspect in establishing a nation, because education is a parameter of the quality of a nation. One way to improve the quality of education is the National Examination . National Examination is a standardized evaluation system of national education quality and equity of education levels between regions. But due to lack of training and exam simulation result many failed in the face of the national exam.

At the end of this project, the author makes an application that can be used to conduct simulation exercises and exam. These applications take advantage of technological advances in mobile phone operating system Android. So that students can do exercises and simulations national exam anytime and anywhere.

This application is expected to be useful in learning and national exams. Thus indirectly increasing the application is able to push the quality of national education.

Key words: education, national examination, android
