ABSTRACT

Education is a very important aspect in establishing a nation, because education is a

parameter of the quality of a nation. One way to improve the quality of education is the

National Examination . National Examination is a standardized evaluation system of national

education quality and equity of education levels between regions. But due to lack of training

and exam simulation result many failed in the face of the national exam.

At the end of this project, the author makes an application that can be used to conduct

simulation exercises and exam. These applications take advantage of technological advances

in mobile phone operating system Android. So that students can do exercises and simulations

national exam anytime and anywhere.

This application is expected to be useful in learning and national exams. Thus

indirectly increasing the application is able to push the quality of national education.

Key words: education, national examination, android
