

ABSTRACT

In IT Telkom, Lab and Ormawa are one of place for students activity in campus. Information from Lab and ormawa can be gotten from the wall magazine. Poster and brocure are untidy arranged. Besides that, wall magazine is far, it makes the students are lazy to read them all. So, it is important to make an application for helping students to know Lab and ormawa activity easily, real time and everywhere. Android application appropriate for students in IT Telkom mostly used smartphone android. In this final project is made an application which help students in IT Telkom know information in wall magazine up to date and portable.

In this final project, there are two feature, that are chatting and notification. The advantages of this application is the students can input details information of their activity. User also can communicate each other in real time. Chat and notification is the newest update from wall magazine. This application is arranged by Java, PHP, database MySQL, and software XAMPP.

The result of this final project is an android application which can help students in IT Telkom to know information about Lab and ormawa activity in wall magazine. This application can be implemented in smartphone android

Keywords: *Android, Lab. and Ormawa, chat, notifications, wall magazine*
