

## **ABSTRACT**

Lecture Registration was an activity at university that done every semester by student, they will input lecture object that will be take for the next semester. Input method is filling lecture object form that give by university. Lecture object form that handle manually might make a big problem cause by *human error*.

In this Final Project has been made “ Lecture Registration System with J2ME Wireless LAN Principle” that can use by student to access the information and lecture registration process for each semester.

This System implementation process using J2ME Programming Language that one of Java technology that deploy to make java aplication would be run on mobile devices, using PHP programming with Macromedia DreamWeaver as HTML editor and MySQL as database.

**Key word** : Java Technology, J2ME, MySQL, PHP
