

ABSTRACT

In this Final Project, we built a web based administration's application. This application was built to help "Kantor Pelayanan Pajak (KPP) Tasikmalaya" which including Taxpayer's registration, record payment of income tax, record income of taxpayer, and making a report. Through this Final Project, data is easier to presents, quick and computerized.

The background of this project was needs from KPP Tasikmalaya's income tax division to have an application that could help their activity to organize taxpayer data and their income and reports making.

This Final Project was built trough structured design and analysis with the waterfall modelling. This application was built using PHP and Java Script as programming languages, MySQL as database system, Adobe Photoshop and Macromedia Dreamweaver as graphical design software. And also Microsoft Visio as a tools for modeling system.

Key word : KPP Tasikmalaya, waterfall, taxpayer, income tax.
