

## **ABSTRACT**

In this final project, a software which helps operational activities, recording and reporting of accounting activities in LookDesign has been made. By using this software, the problems in LookDesign caused by manual (uncomputerized) operational process will be minimized.

LookDesign is a company, moving in printing business. Among the activities LookDesign does are receiving order, doing received order, recording the company income and expenses.

This software is made in order to minimize the problems caused by operational process which are still manually done (uncomputerized operational process). This software is developed using Borland Delphi 7 and MySQL 5.0 alpha.
