

ABSTRACT

DSUQ is one of Indonesian Zakat house which take in hand of Social. DSUQ have many divisions, Ziswaf division is one of the DSUQ divisions, and it has function as a place for people to give zakat, infaq, shodaqoh, and wakaf to other people. Then, it needs an application which can give and managing information about ziswaf faster, with the result that could use in large scale.

In the final project, was built an administration application wab based about ziswaf (zakat, infaq, shodaqoh, and wakaf) which include major process about administration and information service about ziswaf, like registration new donaturs, transaction report which already done. Submission zakat service (npwz or pedati zakat), and equipped with other facilities, like ziswaf consultation, and complain from members about ziswaf process whom they gave, either servicec or other.

This application was built usingh waterfall analysis and design. The system was implementing using structured Programming with PHP and Macromedia Dreamweaver as HTML editor, and MySQL was using as database. This application could make easier on administration and giving information which available faster.

Keywords : Ziswaf, PHP, MySQL
