

ABSTRACT

One of the most important thing in an institute is human. And to support an institute who has large member, it needs an accurate processing data to support activities in that institute.

Church as an institute, it's totality and power so much dependent on people on it. Therefore, it's needs people who can support every activities. In addition, it's needs a scheduling for every church's activities. In this final project, we had implemented an application which can use to process congregation's data and schedule so it can give information about church activities.

This software is build by waterfall method, implemented using Delphi programming language and database MySQL. Web application implemented by PHP programming language.

Keyword : schedule, Congregation Data
