

ABSTRACT

Technological growth in this time along with requirement socialize for expeditious information. Handphone for example, handphone that provided with WAP service give easy service and quickly in giving important information that required by consumer, and also earn to access internet although only certain website that having data format for handphone access.

During the time, the New Student Acceptance in STT Telkom conducted by manual, telephone and via web. To get information, doing registration and to see announcement, the competitor have to await brochures and letter which in disseminating by committee of PMB STT Telkom, buying form in places which have been determined, what generally reside in metropolis or by accessing internet.

In this final project has been made Application of New Student Acceptance of STT Telkom Via WAP, as alternative solution for the competitor that is the High School graduation and College graduation in doing registration to follow enter test of PMB STT Telkom, payment confirmation, and information of announcement of result tes, and also the other information (such as registration time, time of test execution, time and registration expense, procedures of payment and address of committee secretariat PMB STT Telkom). This application builded by using Waterfall Metodologi, with WML And PHP programming language, Mysql database, and also use Emulator tool of WAP and handphone owning service WAP to assist testing process.
