

## ABSTRACT

The old system that used to manage alumni data's still using Microsoft Excel. Microsoft Excel can not handle STT Telkom alumni's data in a online manner. And the system itself cannot observe ,update, and classificate the data based on majority and year's of graduation.

In this final project, a web based application which able to display all the information about STT Telkom alumni's activities will be build. This web application will become a good medium for those who graduated from STTTelkom to communicate each others via internet in discussion forum and chatting. The application can be use to manipulate STT Telkom graduate data, which inputed by the administrator. The graduated student can also manipulate their own data later on.

In this final project we used PHP and Mysql as the database. In designing the interface we use *adobe Photoshop* and *Dreamweaver*.

Key Word: PHP, Mysql, Adobe Photoshop, Dreamweaver.
