

ABSTRACT

PT TELKOM is state-owned corporation, beside yield goods and / or service for the prosperity of society, it also has strategic role in assisting construction and development of vicinity environment. Therefore, formed Telkom Community Development Center (TCDC). Program Bina Lingkungan (PBL) is a part of the TCDC, till now entire business process at PBL-TCDC conducted manually, so required a software integrating data that become a reference for manager to making decision.

On this Final Project has been made an application software for *Bina Lingkungan* Program that a part of Management Information System of TELKOM Community Development Center (MIS-TCDC). It able to do plan, organization, and control the progress of *Program Bina Lingkungan TCDC* (PBL-TCDC). It also able to determine the priority of each activity to support on making decision on choose which activity will be choosed. On this Final Project has been made a software that able to provide informations about PBL-TCDC events, which also contain informations of fund that needed, and also report on PBL-TCDC event.

This software is a web based application, which implemented with PHP, and My-SQL as database, and using waterfall method on developing it.

Keywords : software, web, PHP, My-SQL, waterfall
