

ABSTRACT

PLN is one of public companies that have important role in our society, because of the electricity supply that been provided by PLN is needed by majority of people. To increase services to it's customers, PLN needs facilities that can give information about it's services to their costumers in many condition. Customers that are busy people need a facility in accessing informations of PLN services without having to go to PLN service offices..

Nowaday, the needs of information can be provided by wireless path. Various technologies are arise in balancing life style that becoming more dynamic. One of the technology is J2ME. Application to access information in mobile device using J2ME programming language, is one of the right solutions to give the customers facility to access PLN services information, especially for customers that are busy and don't have much time.

Technology that being used in this Final Project is J2ME at the client side and PHP and MySQL at the server side. User are PLN's customers at client side and PLN's operator at the server side.

Key word: J2ME (Java 2 Micro Edition), PHP and MySQL
