

ABSTRACT

Geladi is one of lessons which must be followed by each student of STT Telkom which done at final vacation of semester 4. Geladi's aims are order to the student know situation and real situation in world work. Others also in order to earn to improve student ability, goodness theoretically and also practice.

Before the execution of geladi, there are procedures which must be fulfilled, There's location choice of geladi by student. The location choice is done by choosing location of the desired of through BAA counter. During the time to do that, student have to queue up length to get innings. Others, if there is change sum up quota or addition of location geladi by external institution which correlate (PT Telkom), worker (admin) have to access the aplication of geladi, then make a change required.

In this final project has been made a software for geladi administration based on WAP, as the alternative for the students in doing input of location geladi and present information about required geladi without having to queue up in BAA counter. This software also earn as the alternative for academic guide lecturer to look the geladi information, and admin in doing process data that is needed.

This system develop by using PHP (Hypertext Preprocessor) and WML (Wireless Mark Up Language). And for database use Mysql

Keyword : WAP, PHP, WML, Mysql
