

ABSTRACT

Rice is the main food for Indonesian people. The biggest consumer for rice is in the west part of Indonesia and in the center part of Indonesia.

Subang is one of the largest rice production in West Java with the contribution is important.

The calculation for determine the rice price is still using manual. Wich make the producer can make lost of fortune.

We make software for determine the rice price automatly. This software can help rice producer, in this case PANCA TANI Subang farmer group, so they can make profit from they produce

We use AHP (Analytical Hierarchy Process) in our software as the basis for the calculation.

We use JAVA programming language and Mysql 4.0.1 as the DBMS.

This software can determine the rice price for rice producer in this case is PANCA TANI Subang farmer group , so they can make profit from their product.
