ABSTRACT

Accountancy is a process of identifying, measuring, recording, and communicating economic information which has a capability to summarize a great amount of company's information into a form which is easier to understand, need to be made. Accountancy activities at PT. Jerbee Indonesia include recording, classifying, summarizing, and making a finance presentation of the company in a certain reports. In recording and making presentation of finance reports, PT. Jerbee Indonesia has to use an accountancy software application, but it still a stands alone application that only can be used at a small data scale.

This software expected to can do recording general transaction and supply transaction, recording data of member, item, employee, and copartner, can get information of company's finance transaction, stock of item, and finance report for member and manager who has responsibility of finance division of PT. Jerbee Indonesia.

This software was built based on web technology, using Tomcat as the web server, Rational Rose 2000 Enterprise Edition for system modeling, JSP (Java Server Pages) as the programming language, and MySQL 4.0.16 as its data bases.
