ABSTRACT

In police structure organization, every staff have their job desk that police can write this data into report. That report used to be analyze crime at some area every year.

Due to system that used of police data management was not computerized, the project data become not structured and not integrated each other, that made the employee difficult to do data management. This software expected to do management data of police by web based interface.

So we can access and management data more fastly, easily, and savely, that can help employee and manager to management building their police data management. Beside that, we can make a report from management data then can show in graph model or tabel model.

Keyword: data management, web, Sukabumi polres.
