

## Abstract

Cooperation is a place that the people use to do the economic affair. Cooperation became the people choose to borrow a money. The progress of information technology not be used by lot of people to make their job more easy. One of the cooperation which not used the information technology progress is Werdhi Sedana Store and Load Cooperation of Badung Regency. Because of that problem, the information system of cooperation has been build.

The information system which has been build is an information system about store and load cooperation which can handle all of the cooperation process. This system also can decrease impact from the old system used. The old system is still used the conventional method and saved the data to a book. That method certain have a defect and impact for their information files. The information which has been save in a document can be broke or lost. The builded of this information system can handled the jobs of cooperation.

Finally this software information system can handle cooperation process such as : store information, borrow, salary, etc. This software is also can search the data of this corporation more easy, because access of information can be done with more faster. This software can do the job from the cooperation such as insert, update, delete, view, searching, salary of the official and setting
