

## ABSTRACT

Information about schedule in a university is very important for the fluent of study process. The example is information about lecture schedule. If its publication is not enough good it maybe any mistakes about information of schedule for lecture and college student. Now, cellular phone/hand phone has been as important need for anyone. There are some schedules applications in HP, but the schedule must be entered. Up to now, online schedule application is not available yet because it is very intern of university. If we can use Java technology especially Java 2 Micro Edition (J2ME) optimally, we can make applications that can support the xx activity especially about schedule.

So, the information about the schedule that can be accessed as mobile is very important for both college student and lecture.

This application will use J2SDK, J2ME Wireless Toolkit, and PHP as its programming language and MySQL as its database. It uses also EditPlus, Netbean, and Macromedia Dreamweaver as editor in coding of program. As its web *server* will be used the Apache Server.

**Keyword: application, mobile, cellular, HP, operator, university.**
