Abstract

Informatics Faculty of IT Telkom have lectures with good qualification. Most of the lectures always attend in many research and become a talker in many seminar. But the lecture don't have application to store in softcopy the document of achivement because the lectures attend in many research and seminar. The lectures always have a problem in produce JFA form for level up carrier as a lecture.

The Application of Work Load Management and Informatics Faculty Lecturer Supporter Factor IT Telkom will resolve this problem.

This Final Project is designed to evaluate the existing information system and make it more perfect. This application, information system based on web, used PHP as the programmed language and MySQL as the database, Dreamweaver as the programmed editor. For the web server is used Apache Web Server.
