

## Abstract

To make the state companies be able to compete with the private companies, the state companies should change their way in getting informations in order to increase the effectivity of the company. One of the example is changing the manual system to computerize type. Information system of attendance and payroll for example, are the systems that will be very useful for the company necessity.

In Bank Perkreditan Rakyat - Badan Kredit Kecamatan (BPR-BKK) Margadana Kota Tegal, they do not use the efficient system, in this case computerize system, to handle attendance and payroll process. This condition brings some difficulties to the personalia staff. Sometimes, they can not give the report or information in time. It makes the company have to spend more time, money, and energy to handle it.

This Final Project have a purpose to make a software based on website which can help the personalia staff in saving the data of attendance and payroll, also in making a report. By using networking technology of *client-server*, this software will be able to be accessed by all of the employees from their computer that conneted in *Local Area Network (LAN)* with different right of access.

**Keywords:** *Attendance, LAN, Payroll, Report, Website.*
