

Abstract

At this final project, a sms application has been built named “Frontliner Championship” (case study at Dinas Flexi Kandatel Bali). They who can be the participants are the customers and the sellers (Frontliner) of CDMA Flexi. They can registry easily just by sending SMS with certain format. Next, the participants can also increase their points by following the regulation. Once in a period, those points will be drawn to win many interesting presents. This application can also give data report to be analyzed by the managers.

This application was built using Sequential Linear model and requiring Apache as server, MySQL for its database, and PHP as its programming language.

Keywords: Flexi, SMS, point, Frontliner, Sequential Linear.
