

ABSTRACT

Permata Raya Clinic Bandung was one of servicing health place at around Moh. Tohha street. This clinic have some doctors who ready to help and serve people health around.

Nowadays, doctor data, patient data, drug data, and transaction data have been done manually, that is unexistence computerization in management and processing patient data, doctor data, drug data and also transaction data. Because of complete patient quantity each day, this clinic needed an application that helping doctor's performance that oriented in servicing patient.

Its because this final project is implemented with client-server database architecture using Microsoft Visual Basic 6.0 programming language and MySQL database about servicing patient application system.

Key Words: Clinic, Client-Server, Visual Basic, MySQL
