Abstract

Private education course provides additional lesson besides primary lesson in school, for example japanese course. The method to present lesson in private education course is using book and white board. However, it needs a different method to bring back the spirit of the students which already bored with the current lesson.

One of the method which can replace the old one is using Japanese Learning System based on multimedia. This learning system can help students learning Japanese especially Hiragana and Katakana. This learning system is a kind of desktop apllication based on multimedia, so students become more interested in learning and the process become easier.

Japanese Learning System is better than other presentation method because this application is based on multimedia. With the result, students become more interesting to study japanese. This Japanese Learning System can help students who never studied japanese before.

Keywords: *Multimedia, Japanese, Hiragana, Katakana.*
