

Abstract

Now, Depdiknas already have a process to give certificate for teachers so teachers quality can be increase so the quality of education system and practice increase too. This process is named *teachers certification*. There are many criterias which is must be completed in order that can be pass in this process and be arithmetic so can make result is that teachers pass or no. But, all final decision is on Depdiknas province. As long as time, processing data and that criterias at Depdiknas Kab. Ngawi still manually.

In this final project will made application which is can help the sertification team to processing of certification so administration process and data arithmetic not be processed manually. This sistem made with waterfall method which is well organized with good testing quality. Tools which is used are PHP, Macromedia Dreamweaver as editor HTML, interface design with Adobe Photoshop, and database with MySQL.

The result of making this web application is application can be used to processing teachers data with good database, can be used for arithmetic portofolio and grade, can help certification process in regency phase so can make communication between Depdiknas regency with province easier.

Keywords : *application, certification, PHP, MySQL, Web*
