ABSTRACT

Distro Frontline is one distro that sells all sorts of clothing, bags, accesoris, and many others. Frontline distributions are at Dewi Sartika 19 Bandung. Frontline distributions is quite promising business processes, most sales Frontline distributions are young people and also many wholesale out of town. Distro Frontline has a complex process in the processing of data. Frontline distributions data recording is still done manually. In accordance with their existing business processes, it is necessary to create an media application which is intended to simplify and facilitate the proper recording of time in processing sales transactions, ordering and delivery of goods.

Therefore, the final project titled "Sales Application Based on Webof Distro Frontline Dewi Sartika" is a media which deals with data management for the process of selling existing products in the Frontline Dewi Sartika distributions, which are the product sales data management, payment management products, and management processes carried out by other admins, and other components that support this application.

The final project is made using software engineering waterfall method, and implemented using the PHP programming language, while the processing of database use MySQL. **Keywords** : Distro Frontline, web-based applications, PHP and MySQL.
