Abstract

English is one of the most common languages used by people, be it at work, college or in daily life, be it written English or spoken. Because of that, at the present, English is a need.

English had a standard that used in many places, which is TOEFL. TOEFL (Test Of English as Foreign Language) are a standard used to evaluate English capability on academic environment, or non academic environment, to measure someone's proficiency in using English. But, to reach a desirable grade in TOEFL, someone's must train various English skills, such as Listening skill, grammatical skill, and many other things. *E-learning* that are developed here are made to help *user* improve his/her English skills, by giving *user* exercise, and feedback to help *user* on improving his English skills to face TOEFL test.

This developed *E-learning* is web based, with an interactive interface, but made as simple as possible to avoid *user* confusion.

This *system* are implementing a lot of commonly used software, Dreamweaver and PHP are used for the web programming, database programming using MySQL, and others supporting application.

Key words: English, E-learning, TOEFL, PHP, MySQL.
